

Floating Habitat: A Balancing Act

AT THE MARINE SCIENCE EDUCATION CENTER

WHAT: *Habitat balance is essential to our coastal estuaries and oceans. Sargassum seaweed is just one important nursery habitats for young fishes, crabs, shrimp and other invertebrates, as well as endangered sea turtles. Join UTMSI scientists as they share their research about these floating nurseries and what impact the Deepwater Horizon oil spill had on them.*

WHO: *This program is geared for everyone to enjoy.*

WHEN: *Saturday, May 13, 2017
10:00 - 11:00 a.m.*

COST: *Free*

WHERE: *[The Marine Science Education Center](#)
University of Texas Marine Science Institute
855 E. Cotter Ave, Port Aransas, TX 78373*
