

Rencontres du Vietnam **Viet Nus 2017**

Neutrinos: challenges and limitations

Quy Nhon, Vietnam, July 10-21, 2017

Topics

- High energy cosmic neutrinos
- Atmospheric neutrinos
- Reactor fluxes
- Accelerator fluxes
- Solar flux
- Theory limitations
- Monte Carlo inputs and tools

Quy Nhon is a coastal town in central Vietnam. It is about one hour flight from Ho Chi Minh City and one and a half hour from Hanoi. The origins of the town stretch back to the 11th century Cham civilization, whose vestiges can be visited. The present town was officially founded over 10 years ago. The conference venue is ICISE, the new International Center for Interdisciplinary Science and Education.
